Getting Started

Find

Collect references by searching online databases or importing your existing collection.

- Search an online database
- Create a reference manually
- Import references
- **NEW!** Find your best potential journal

Store & Share

Organize and group references in any way that works for you. Then share your groups with colleagues.

- Create a new group
- Share a group
- Find duplicate references

The background of the slide is a light gray gradient. In the top-left and bottom-right corners, there are several realistic-looking water droplets of various sizes, some overlapping. The text is centered in the middle of the slide.

Part 2 : The EndNote Library

EndNote libraries

- Endnote references are stored in a database called a *library*
- Endnote libraries have the file extension .Enl.
- Each library has a corresponding folder with the extension .Data.
- This folder will have the same name as the library, and it is where images, PDF files, etc. are stored
- If you move, copy, rename or delete a library remember to do the same with its corresponding .Data folder

Health-related Quality of Life and its Predictors Among Transfusion-dependent Patients.

Tuysuz G¹, Tayfun F.

+ Author information

Abstract

PURPOSE: With regular blood transfusions and modern medical management strategies, transfusion-dependent patients are currently living into adulthood, but they still suffer from the chronicity of the disease and its complications. The purpose of this study was to evaluate the health-related quality of life (HRQoL) scores in pediatric TDT patients compared with healthy controls.

PATIENTS AND METHODS: The PedsQL 4.0 Generic Core Scales were administered to 80 pediatric TDT patients (aged 5 to 18 y, child self-report) and their parents (parent-proxy report), as well as age-matched and sex-matched healthy controls (80 participants and their parents).

RESULTS: Patients with TDT and their parents rated lower HRQoL scores in all domains (physical, emotional, social, and school functioning) compared with the healthy population ($P < 0.01$). The univariate analysis indicated that the total HRQoL score for children's self-reports was negatively predicted by high ferritin levels and the presence of any complication. The only negative predictor of the total HRQoL score in multivariate analyses was a high ferritin level (> 1800 ng/dL).

CONCLUSIONS: This study showed that thalassemia has a negative impact on HRQoL when compared with a healthy population. For a better quality of life, intensive treatment should be applied for complications and high ferritin levels.
